That version of the file will be updated from time-to-time, with the 'revision' noted in the schematic itself.

The schematic is a best guess layout based on a partially wired unit on hand and other materials on-line.

The 'reverb' section was mostly missing from the unit on hand, and so the details surrounding the tank won't necessarily match the original (other than the types of tubes). The component values and hookups were chosen based on the aftermarket tank added.
