

Notes:
S1, S2, S3 otherwise noted all resistors are 10%, 1/2 watt
S1 on rear of Volume knob
S2 on rear of Tremolo knobs
Units were built with 12AT7 tubes in, reverb tank and skr attached, trem. off, knobs at half
This schematic is a best guess based on a partially wired unit on hand and other materials on-line.
The reverb section was mostly missing from the unit on-hand, and so what is here reflects the addition of a new tank.
If you have an original unit and can provide updates/corrections, please send them along to ac1010nfc.ca
